01 / COMPANY

Installation support

Apex Cladding Ltd is a specialist façade installation subcontractor based in Basildon, Essex. We support contractors with defined installation packages and additional site labour for new-build, recladding and remedial works. Director Dragos Agapie remains directly involved in site delivery and coordination.

Labour-only
Installation focus

Up to 15
Scalable operatives

75 miles
Approximately, around London

We can begin with a small crew and increase numbers to suit the package. Team size and mobilisation are agreed around workload, access and existing commitments.

02 / EXTERNAL ENVELOPE

Cladding and recladding

Installation of new cladding and replacement façade finishes, with labour support from preparation and support rails through to panel fixing, returns and interfaces.

Recladding boards fitted; access equipment and temporary protection remain.

Fitted dark cladding panels

Support rails before panel installation

Package scope

Experience includes aluminium, Trespa/HPL, Euroclad, stone and GRC. Removal and replacement work, membranes, insulation, rails and finishing details can be included in an agreed installation package.

03 / EXTERNAL ENVELOPE

Support systems and concealed work

Brackets, rails, insulation, cavity barriers, EPDM and membranes form part of our façade installation scope. The photographs show supporting construction before the external finish is closed up.

Insulation and vertical support rails during installation.

Bracket and rail at the façade opening

Membrane and insulation interfaces

Package scope

Installation follows the project drawings and specified system details. Inspection points, photographs and access for checking concealed work are coordinated with the contractor. Requirements vary by system and project.

04 / GLAZING

Curtain walling, windows and doors

Installation support for curtain walling and unitised systems, aluminium windows and doors. Our scope includes setting out, framing, glazing and interfaces with adjacent façade work.

Installed curtain wall glazing, viewed from the unfinished interior.

Window assembly at a balcony opening

Glazed entrance doors

Package scope

Frame and bracket setting out, mullions and transoms, glazing, door fitting and associated perimeter work. Scope, lifting arrangements and inspection requirements are agreed for each package.

05 / ARCHITECTURAL METALWORK

Copings, flashings and cills

Metal finishing work at roof edges, parapets, openings and façade junctions. These interfaces bring together the cladding, glazing and adjacent construction.

Fitted metal parapet coping; surrounding work remains in progress.

Flashings at a glazed corner

Window cill with temporary protection

Package scope

Copings and support brackets, window cills, head and corner flashings, fascias and associated trims. We coordinate junctions and protect adjacent finishes during installation.

06 / PANELS AND ARCHITECTURAL ELEMENTS

Soffits and GRC

Soffit and canopy installation, together with GRC casings, surrounds and panels. Work includes support framing, panel fixing and finishing at edges and adjacent openings.

Fitted EQUITONE soffit panels above balcony glazing.

GRC casing between glazed bays

GRC panel beside a glass balustrade

Package scope

Soffit brackets, rails and insulation; EQUITONE and other specified panels; GRC columns, reveals and balcony panels. Setting out and junctions are coordinated with the project details.

07 / BALCONIES AND TERRACES

Balustrades and decking

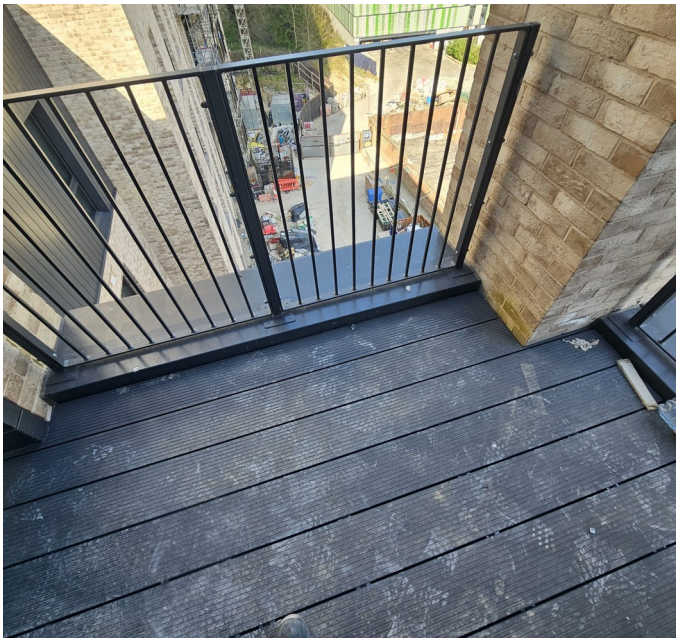

Installation support for glass and metal balustrades and balcony decking. Our work covers supporting components, fixing, deck boards and finishing at edges and thresholds.

Glass balustrade with a fitted top rail.

Fitted grooved balcony decking

Metal balustrade and balcony deck

Package scope

Balustrade base channels, fixings, glass and handrails, plus decking support rails and board installation. The photographs illustrate fitted components and finishes; the surrounding project may still be in progress.

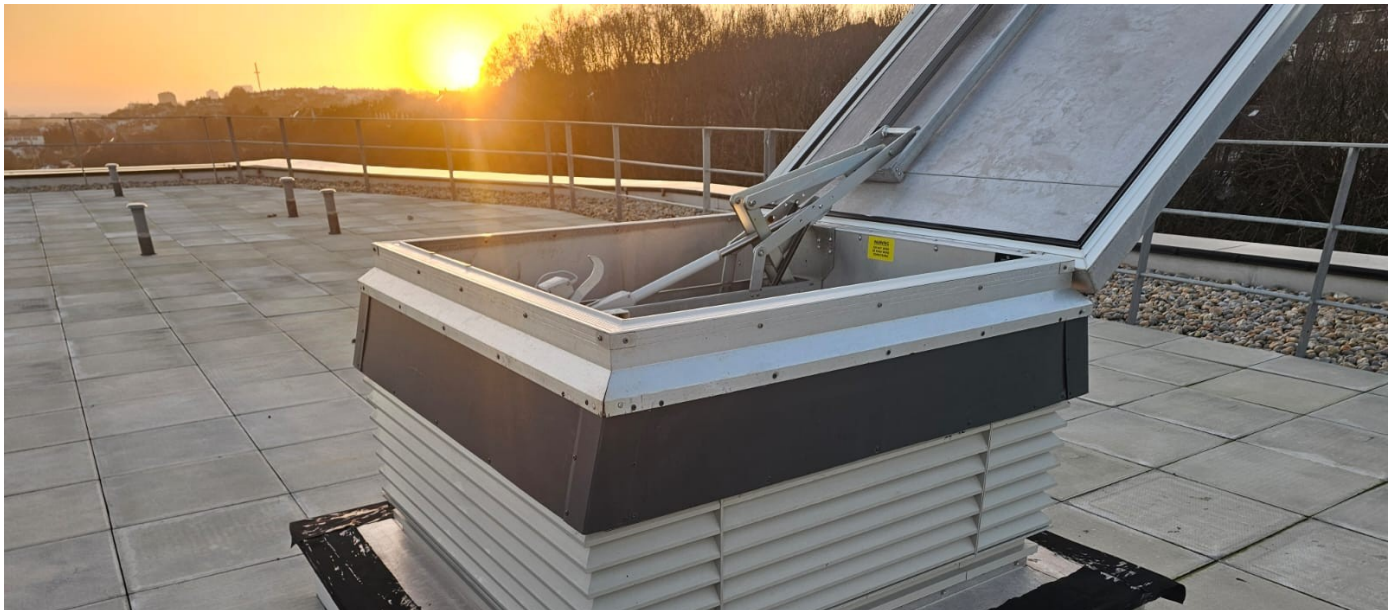

08 / SPECIALIST OPENINGS

Louvres and roof hatches

Installation of louvred assemblies and roof access hatches, with wider capability covering rooflights and associated façade openings.

External louvre assembly within the brick façade.

Roof access hatch with its lid open.

Package scope

Frame positioning, fitting and associated perimeter interfaces within the agreed package. Specialist access and lifting needs are reviewed before mobilisation.

09 / COMPLETION AND CUSTOMER CARE

Sealants, repairs and painting

Mastic and sealant work, magic man repairs, painting and touch-ups to façade components. We support the finishing and customer-care tasks that accompany installation packages.

Window-to-cladding perimeter detail

Finished dark door-frame surfaces

Package scope

Joint preparation, masking and sealant finishing; local surface repairs, protection and painting. Repair limits, finish expectations and any sample requirements are agreed before work starts.

10 / WORKING TOGETHER

Site delivery and management

Direct involvement from Dragos Agapie gives contractors a clear point of contact for labour requirements, site coordination and installation progress.

Façade framing during installation. This is an actual site photograph.

Agree the package

Review the drawings, scope, access, programme and crew requirements. Confirm responsibilities for materials, plant, lifting and inspection before the team starts.

Plan and coordinate

Project-specific RAMS and lifting plans can be prepared in-house. Supervision and day-to-day coordination are arranged to suit the work and the contractor’s site procedures.

Inspect and close out

We support the contractor’s QA process through agreed inspections, installation photographs and snag close-out. Detail changes and incomplete interfaces are raised for clarification.

Management credentials

NVQ Level 6 Construction Site Management • CSCS Black Manager Card
Appointed Person • First Aid

11 / ENQUIRIES

Discuss your next package

Send the location, scope, drawings and programme. We will review the installation requirements and discuss a suitable crew size, working sequence and availability.

For a useful first discussion

Location and scope. Trade package, quantities and the work stages required.

Drawings and specifications. Current information and the proposed façade systems.

Programme. Start date, duration and expected continuity of work.

Site arrangements. Access, lifting, storage and material supply responsibilities.

Delivery requirements. Supervision, crew size and inspection or QA expectations.

We can start with a small team and scale up to 15 operatives where the workload requires. Mobilisation and commercial terms are agreed for each package.
